

Computational Quantum Physics

Week 8

Due on 11/1/22

Exercise 1: Renormalization Group

Given the quantum Ising Hamiltonian in transverse field on a one-dimensional lattice with nearest neighbor interaction:

- (a) Compute the ground state energy as a function of the transverse field λ by means of the real-space RG algorithm.
- (b) *Optional:* Compute the ground state energy as a function of λ by means of the INFINITE DMRG algorithm. Compare the results between them and with the mean field solution.
